VOICE OVER IP (VOIP)

Cost-effective voice services to  
keep you connected

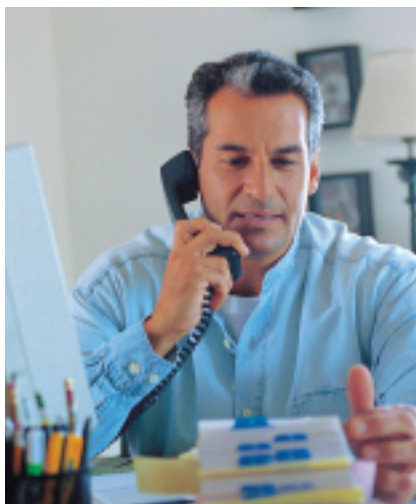

## DIRECWAY® VoIP—cost-effective voice services to keep you connected.

With its ability to extend and change the boundaries of global competition, the Internet has delivered a communications revolution that has transformed lives and business across the world.

Paving the way, Hughes Network Systems has developed DIRECWAY® VoIP, a service designed to let customers ride the waves of change and leverage greater benefit from their broadband connection.

DIRECWAY VoIP enables you to use a standard telephone with a DIRECWAY satellite Internet connection to make and receive phone calls all around the world at incredibly competitive rates.

With DIRECWAY VoIP, you can benefit from fast, high-quality, low-cost voice and Internet connectivity with superior performance at every location, regardless of the availability or quality of the local telecommunications infrastructure.

### ■ Make voice calls while you surf

With DIRECWAY VoIP, you can surf, send and receive emails, download files and make a voice call, all at the same time.

Every time you make or receive a call, software converts your speech into digital information that is sent via the Internet. This is known as Internet telephony or VoIP (Voice over Internet Protocol). When that information nears its destination, it is converted back to speech—so it is just like a normal phone call! As the bandwidth you are using can deliver both Internet and voice traffic, sophisticated networking tools ensure that all your voice calls are given prioritised bandwidth access over other Internet traffic.

## ■ Communicate anywhere, anytime with DIRECWAY VoIP

Regardless of the country\* in which you set up your DIRECWAY VoIP account, when someone dials your DIRECWAY phone number, your phone will ring. For example, all numbers are local U.S. numbers, so should you set up your service in Spain, when someone dials your phone number, it rings at your home in Spain.

Powered by Net2Phone, a market leader in the provision of Internet telephony services, DIRECWAY VoIP allows you to take advantage of market-competitive rates for all your calls. In addition, as calls are routed over the Internet before breaking out onto the traditional fixed network, call costs are often less than if the call had originated and remained on a traditional telephone network.

## ■ Access your account online

There are no bills and no contracts for the DIRECWAY VoIP service—you simply increase your talk time as and when you like. All you pay is a monthly line rental fee and whenever you need to increase your credit balance to make calls, simply contact your dealer who will arrange prepaid credit for your account.

For complete control, you will also be given access to a secure on-line portal where you can check your account at any time of the day to:

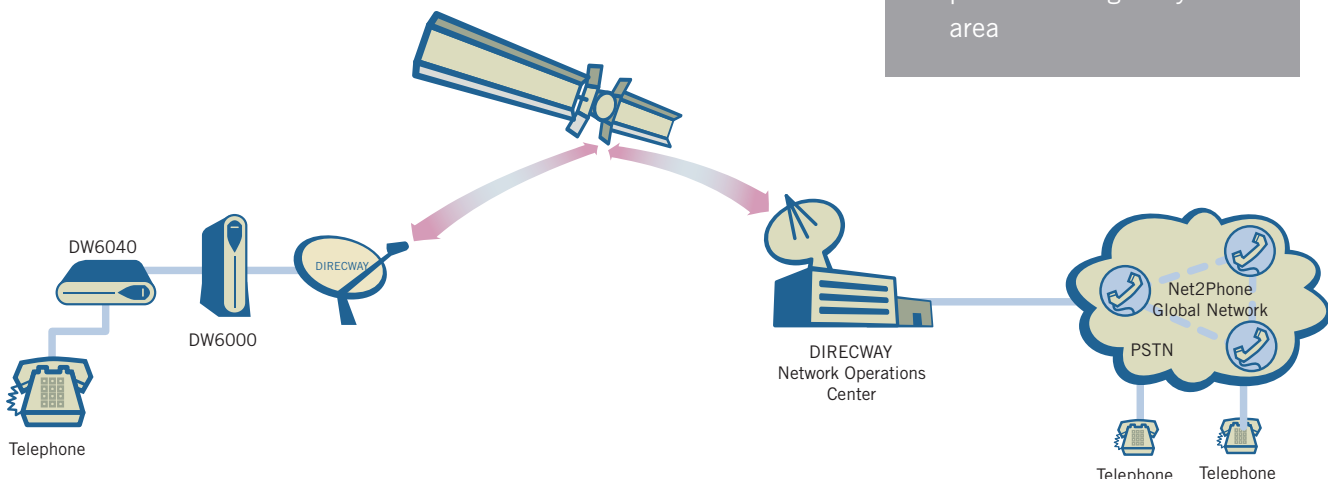

- Get up-to-date account balances
- View itemised call records
- Check call rates applicable to your account

## ■ DIRECWAY benefits

- Combined Internet and telephony access—all from a single provider
- Full control of your phone costs through a secure on-line portal to access and manage your account at any time
- Make voice calls and access the Internet at the same time

### DIRECWAY VoIP is the right choice if

- You cannot get a terrestrial land line installation
- You cannot get mobile phone coverage in your area

\*Subject to country availability and licensing requirements. See provider for eligibility.

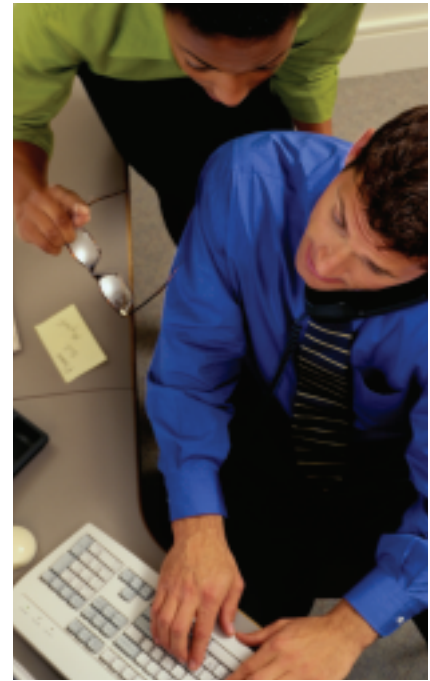

## ■ Get DIRECWAY VoIP today

Whether you are new to DIRECWAY or an existing user, DIRECWAY VoIP can be ordered through any one of our partners, who will provide the necessary equipment and professional services to install and configure your connection.

For existing DIRECWAY users, a DW6040 voice appliance will be installed and configured with your existing terminal. Registration for a dedicated U.S. local phone number and secure user account is all that is then needed to get your broadband connection voice enabled.

For new users, simply sign up to one of four DIRECWAY broadband Internet access service plans with your local dealer. Each plan is designed to suit a range of user needs from the individual home user or teleworker, through to multi-user, multi-site businesses. A remote terminal, antenna and a DW6040 voice appliance will be provisioned along with your telephone account.

Included with every account is a pre-defined set credit, so once your line is professionally installed and this is configured, you simply plug your telephone into the DW6040 and make your first call! If you need a higher credit balance, simply request additional credit at time of purchase.
